Disease Prediction System Report

Date: 2026-10-20 20:56

Patient Information

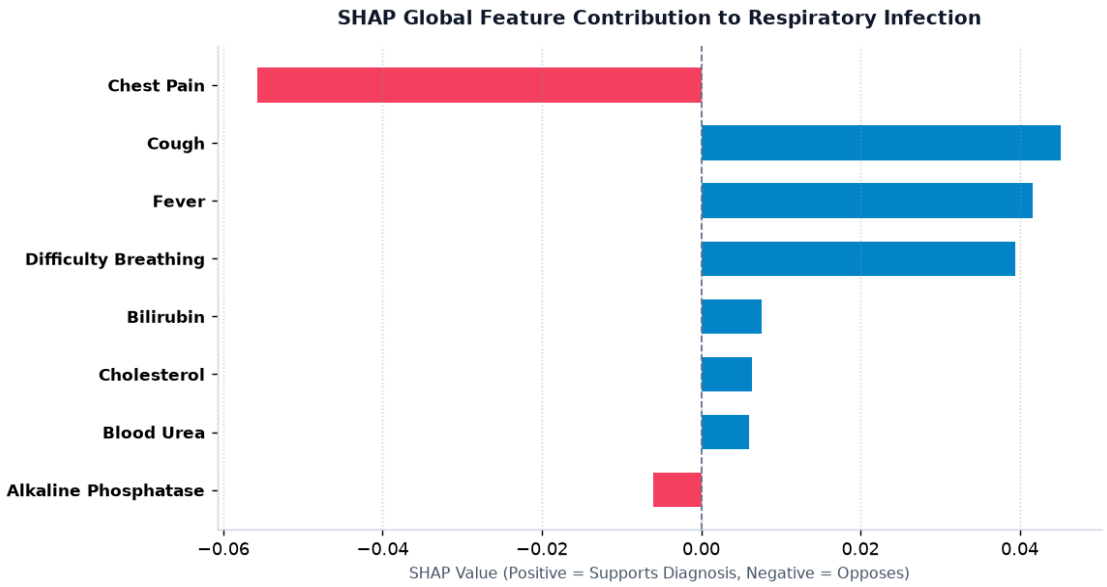

Name:	kamal	**Age:**	39
Gender:	Male	**Date:**	2026-10-20

Prediction Results

Disease	Probability
Respiratory Infection	24.3%
Heart Disease	17.54%
Breast Cancer	13.7%

Explainable AI: SHAP Global Feature Contribution

SHAP (SHapley Additive exPlanations) computes game-theoretic contribution values for each vital sign and clinical symptom.

Explainable AI: LIME Local Decision Rules

LIME (Local Interpretable Model-agnostic Explanations) builds a local surrogate linear model around this patient to identify the exact biometric thresholds driving the diagnosis.
